Containers	podman

Contents

Step 1	The authority opens an assessment	Step 35	The same history, against the process it followed
Step 2	Third-party evidence is gathered	Step 36	The action bar offers only what the case can actually do
Step 3	The case is given to a named officer	Step 37	A mandatory source that cannot answer holds the case at the door
Step 4	The work reaches the officer who must do it	Step 38	A case opened in error is cancelled outright
Step 5	The assessor takes the case up	Step 39	The case is parked on the taxpayer
Step 6	The assessor states what the return got wrong	Step 40	A reviewer may not record the response
Step 7	The liability is computed, showing its working	Step 41	The assessor records what the taxpayer sent back
Step 8	The assessment goes for a second pair of eyes	Step 42	Approval is a decision, so it can go the other way
Step 9	The assessor cannot accept their own work	Step 43	The assessor takes the rejected assessment back
Step 10	The reviewer is not satisfied	Step 44	The authority gives up on money it is owed
Step 11	The assessor picks the returned case back up	Step 45	The authority finds against itself
Step 12	The liability is computed again	Step 46	The correction is opened on the same case
Step 13	The reworked assessment goes back to the reviewer	Step 47	The reassessment is picked up like any other work
Step 14	The reviewer accepts the reworked assessment	Step 48	Most disputes end somewhere in the middle
Step 15	The platform decides who must approve	Step 49	A partial outcome reopens the same case
Step 16	The action bar offers the assessor nothing	Step 50	The other end of a rejected objection
Step 17	The taxpayer sees their own affairs and nothing else	Step 51	The tribunal changes the figure rather than the principle
Step 18	The assessment is approved	Step 52	Giving effect to what the tribunal held
Step 19	An approved assessment is not yet a determination	Step 53	The tribunal declines to decide and sends it back
Step 20	The approved figure becomes a determination	Step 54	Doing it again, as directed
Step 21	The determination is written into a notice	Step 55	The assessment survives the tribunal
Step 22	The notice still says what it said when issued	Step 56	The money arrives after the appeal is lost
Step 23	The notice is despatched, and the clock starts	Step 57	A paid case is closed and its position frozen
Step 24	The taxpayer now has a window to object	Step 58	The ordinary ending: the taxpayer pays the notice
Step 25	The taxpayer disputes the assessment	Step 59	A deadline passing is an event, not an absence
Step 26	Whether to hear it is decided before what to decide	Step 60	Silence returns the case to the officer who asked
Step 27	What the taxpayer must pay to be heard	Step 61	A limitation period runs out on a case nobody ever worked
Step 28	The people who considered it say what they thought	Step 62	The same sweep stops an assessment already under way
Step 29	The objection is rejected, with reasons		
Step 30	The status decides the shape, not the officer		
Step 31	The dispute leaves the authority		
Step 32	What the tribunal held is transcribed, not decided		
Step 33	The file is closed and the final position frozen		
Step 34	Everything that happened, in order, unalterable		

Coverage of the case state machine

The case lifecycle declares 44 transitions. A transition counts as covered when a step in this run drove exactly that move.

From	Action	To	Actors	Covered
(case creation)	INITIATE	INITIATED	TA_SUPERVISOR, SYSTEM, TA_ADMIN	Covered by step 1
INITIATED	RETRIEVE_DATA	DATA_READY	SYSTEM	Covered by step 2
INITIATED	CANCEL	CANCELLED	TA_SUPERVISOR	Covered by step 38

REASSESSMENT_INITIATED	START	IN_PREPARATION	TA_ASSESSOR	Covered by step 47
SETTLED	CLOSE	CLOSED	TA_SUPERVISOR, SYSTEM	Covered by step 57
INITIATED	LIMITATION_EXPIRED	TIME_BARRED	SYSTEM	Covered by step 61
IN_PREPARATION	LIMITATION_EXPIRED	TIME_BARRED	SYSTEM	Covered by step 62
AWAITING_TAXPAYER_RESPONSE	WRITE_OFF	WRITTEN_OFF	TA_SUPERVISOR	Covered by step 44

Covered 44 of 44. Not covered 0. Coverage 100.0%.

Step 1. The authority opens an assessment

Actor: supervisor | **Kind:** transition | **Transition:** (none) --INITIATE--> INITIATED | **Status after:** Data ready | **Recorded at:** 2026-09-19T06:56:40.675Z

A supervisor opens a desk assessment against a company for one tax year, giving the reason it was selected. Nothing is assessed yet: opening a case is the authority putting on record that it intends to look at this period, which starts the limitation clock and makes every later act attributable.

What this proves. The register issues a case number of the form TA..., and the case exists.

Journey

Timeline

Evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:26	07da776b65260306Feb360e0...

Page 6 of 101

Step 2. Third-party evidence is gathered

Actor: system (process engine) | **Kind:** transition | **Transition:** INITIATED --RETRIEVE_DATA--> DATA_READY | **Status after:** Data ready | **Recorded at:** 2026-09-19T06:56:42.431Z

The platform asks every configured source for what it holds on this taxpayer: the filed return, bank interest, third-party sales data. The case becomes workable only once every mandatory source has answered, which is why nobody presses a button called "the data arrived". Here the process engine drove it, unprompted, seconds after the case opened.

What this proves. The status reads Data ready and the evidence tab lists the sources that answered.

Step 3. The case is given to a named officer

Actor: supervisor | **Kind:** transition | **Transition:** DATA_READY --ASSIGN--> ASSIGNED | **Status after:** Assigned | **Recorded at:** 2026-09-19T06:56:44.148Z

A supervisor hands the case to a particular assessor by name. The server refuses an assignment that names nobody, because a case recorded as assigned but sitting in no officer's queue is worse than one still waiting to be given out.

What this proves. The status reads Assigned and the header records who holds the case.

Step 4. The work reaches the officer who must do it

Actor: assessor | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** unchanged | **Recorded at:** 2026-09-19T06:56:45.867Z

The register each officer sees is scoped to the cases they hold. This is the whole point of assigning: a case that does not appear here is one its owner cannot find and therefore will not work.

■ **What this proves.** The case number TA202600000281 is listed in the assessor's own register.

Step 5. The assessor takes the case up

Actor: assessor | **Kind:** transition | **Transition:** ASSIGNED --START--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:56:47.235Z

Starting preparation is the assessor accepting the case as their own work. From here the figures may be changed, and every change is attributed to them. The separate step exists so that the time a case sat unopened is visible.

What this proves. The status reads In preparation.

Step 6. The assessor states what the return got wrong

Actor: assessor | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:56:48.989Z

The assessor adds forty thousand to declared revenue, citing a mismatch with third-party data. An adjustment is a claim about the facts and must carry its type, its statutory reason and a narrative, because this is the paragraph the taxpayer will be answering if they object.

What this proves. The adjustment appears in the case with its amount, reason and narrative.

Page 12 of 101

Step 7. The liability is computed, showing its working

Actor: assessor | **Kind:** transition | **Transition:** IN_PREPARATION --CALCULATE--> CALCULATED | **Status after:** Calculated | **Recorded at:** 2026-09-19T06:56:50.782Z

The server applies the rule set for this jurisdiction and year to the evidence and the adjustments. It returns not only the figure but the trace: every step, in order, with the amount before and after. A reviewer checks the trace by hand, which is why the right answer reached by the wrong route is treated as a defect here.

What this proves. The status reads Calculated and the trace lists more than three arithmetic steps.

What changed

Calculate

Computed on the server against the rule set in force for the period. The browser displays; it never calculates.

Version 1 · rule set GB-CIT-FY2024 v1 · 2026-09-19 12:26

Declared	0.00
Adjustments	40,000.00
Assessed base	40,000.00
Losses set off	0.00
Taxable base	40,000.00
Tax before credits	7,600.00
Credits	0.00
Penalty	0.00
Interest	0.00
Net payable	7,600.00 GBP

How this figure was reached

Every line is arithmetic you can check by hand. That is the test a trace has to pass.

#	STEP	WORKING	RESULT
1	BASE_DETERMINATION	0 + 40000 = 40000	40,000.00
2	LOSS_SET_OFF	No losses available or no loss rule in force	0.00
3	TAXABLE_BASE	(40000 - 0) rounded HALF_UP to 0 dp = 40000	40,000.00
4	RATE_APPLICATION GB-CIT-FY2024/RATE_BAND/1	40000 x 0.19 = 7600 (at or below the lower limit 50000)	7,600.00
5	RATE_APPLICATION	tax on 40000 = 7600	7,600.00
6	SURCHARGE	No surcharge in force	0.00
7	CREDITS	7600 - 0 = 7600	7,600.00
8	PENALTY	No penalty applies	0.00
9	INTEREST	Paid on time	0.00
10	NET_POSITION	(7600 + 0 + 0) - 0 = 7600 (payable)	7,600.00

Step 8. The assessment goes for a second pair of eyes

Actor: assessor | **Kind:** transition | **Transition:** CALCULATED --SUBMIT--> UNDER_REVIEW | **Status after:** Under review | **Recorded at:** 2026-09-19T06:56:52.743Z

No assessment leaves the authority on one officer signature. Submitting hands the work to a reviewer and closes the assessor out of it, which is the moment the separation of duties starts to bite.

What this proves. The status reads Under review.

Timeline

Evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:26	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:26	07f1bbf26567995929149412...

Step 9. The assessor cannot accept their own work

Actor: assessor | **Kind:** refusal | **Transition:** none (no lifecycle move) | **Status after:** Under review | **Recorded at:** 2026-09-19T06:56:54.301Z

The assessor presses Accept on the case they just wrote. The server refuses and names the role that may act. Segregation of duties is not a feature anybody can see working; it is only visible when somebody tries the shortcut and is stopped.

What this proves. A red alert quotes the server: the action requires a reviewer, and the status has not moved.

Step 10. The reviewer is not satisfied

Actor: reviewer | **Kind:** transition | **Transition:** UNDER_REVIEW --RETURN--> REVIEW_RETURNED | **Status after:** Review returned | **Recorded at:** 2026-09-19T06:56:55.853Z

A review that can only say yes is not a review. The reviewer returns the case to the assessor, and the return is recorded as its own event rather than as a silent reversal, so that a case reworked three times reads differently from one accepted first time. The button stays dead until the reviewer types what is wrong, because a return the assessor cannot act on is a round trip for nothing.

What this proves. Return for rework is disabled while the reason is empty; once it is given the status reads Review returned and the case is back with the assessor.

Step 11. The assessor picks the returned case back up

Actor: assessor | **Kind:** transition | **Transition:** REVIEW_RETURNED --START--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:56:57.235Z

A returned case goes back to preparation rather than to a special rework state, because the work is the same work. The history keeps the loop visible, so the second submission is plainly a second submission.

What this proves. The status reads In preparation again, with the earlier adjustment still there.

Step 12. The liability is computed again

Actor: assessor | **Kind:** transition | **Transition:** IN_PREPARATION --CALCULATE--> CALCULATED | **Status after:** Calculated | **Recorded at:** 2026-09-19T06:56:57.800Z

Recalculating supersedes the previous result rather than editing it. The earlier figures stay in the record with their own trace, because a case that was once assessed at a different number is a fact an appeal may turn on.

■ **What this proves.** The status reads Calculated and a current result carries a fresh trace.

What changed

Calculate

Computed on the server against the rule set in force for the period. The browser displays; it never calculates.

Version 2 · rule set GB-CIT-FY2024 v1 · 2026-09-19 12:26

Declared	0.00
Adjustments	40,000.00
Assessed base	40,000.00
Losses set off	0.00
Taxable base	40,000.00
Tax before credits	7,600.00
Credits	0.00
Penalty	0.00
Interest	0.00
Net payable	7,600.00 GBP

How this figure was reached

Every line is arithmetic you can check by hand. That is the test a trace has to pass.

#	STEP	WORKING	RESULT
1	BASE_DETERMINATION	0 + 40000 = 40000	40,000.00
2	LOSS_SET_OFF	No losses available or no loss rule in force	0.00
3	TAXABLE_BASE	(40000 - 0) rounded HALF_UP to 0 dp = 40000	40,000.00
4	RATE_APPLICATION GB-CIT-FY2024/RATE_BAND/1	40000 x 0.19 = 7600 (at or below the lower limit 50000)	7,600.00
5	RATE_APPLICATION	tax on 40000 = 7600	7,600.00
6	SURCHARGE	No surcharge in force	0.00
7	CREDITS	7600 - 0 = 7600	7,600.00
8	PENALTY	No penalty applies	0.00
9	INTEREST	Paid on time	0.00
10	NET_POSITION	(7600 + 0 + 0) - 0 = 7600 (payable)	7,600.00

Versions

Every recalculation is kept. "The officer asked for a recalculation at this time" is itself a fact worth recording.

VERSION	RULE SET	CALCULATED	NET PAYABLE
2	GB-CIT-FY2024	2026-09-19 12:26	7,600.00
1	GB-CIT-FY2024	2026-09-19 12:26	7,600.00

Step 13. The reworked assessment goes back to the reviewer

Actor: assessor | **Kind:** transition | **Transition:** CALCULATED --SUBMIT--> UNDER_REVIEW | **Status after:** Under review | **Recorded at:** 2026-09-19T06:56:58.116Z

The same transition as the first submission, driven a second time. The loop back through review is the ordinary shape of this work rather than an exception, and the state machine models it as one.

■ **What this proves.** The status reads Under review for the second time in this history.

1	GB-CIT-FY2024	2026-09-19 12:26	7,600.00

Step 14. The reviewer accepts the reworked assessment

Actor: reviewer | **Kind:** transition | **Transition:** UNDER_REVIEW --ACCEPT--> REVIEWED | **Status after:** Reviewed | **Recorded at:** 2026-09-19T06:56:59.677Z

The reviewer is satisfied with the figures and the reasons given for them. Acceptance is a personal act attributed to a named officer, and it is the last point at which the assessment can be changed quietly.

What this proves. The status reads Reviewed.

FILING_STORE	2026-09-19 12:26	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:26	07f1bbf26567995929149412...

Step 15. The platform decides who must approve

Actor: reviewer | **Kind:** transition | **Transition:** REVIEWED --ROUTE_APPROVAL--> PENDING_APPROVAL | **Status after:** Pending approval | **Recorded at:** 2026-09-19T06:57:01.330Z

Nobody chooses their own approver. The reviewer asks for routing and the platform matches the assessed amount against the configured delegation bands, then states in a sentence how it decided. That sentence is the answer to "why has this landed on me".

What this proves. The status reads Pending approval and the screen names the band the amount fell into.

Step 16. The action bar offers the assessor nothing

Actor: assessor | **Kind:** refusal | **Transition:** none (no lifecycle move) | **Status after:** Pending approval | **Recorded at:** 2026-09-19T06:57:02.783Z

The assessor opens the case waiting for approval and finds no Approve button. The server would refuse the action in any event; hiding it is a courtesy so that an officer is not invited to press something that will be denied.

What this proves. No control labelled Approve exists anywhere on the assessor’s view of the case.

Step 17. The taxpayer sees their own affairs and nothing else

Actor: acme-finance | **Kind:** refusal | **Transition:** none (no lifecycle move) | **Status after:** unchanged | **Recorded at:** 2026-09-19T06:57:05.234Z

A taxpayer signs in and gets the portal. Asked directly for the officer register and for this case, the server answers 403 to both, so the separation holds even for somebody who types the address by hand rather than following a menu. The screenshot shows what they do get: their own position, in plain words.

What this proves. GET /cases and GET /cases/{id} both return 403 for the taxpayer, while the portal loads.

Part 1 of 5 of one tall screenshot, shown at full size rather than shrunk to a single page. Consecutive parts overlap by 12mm, so nothing falls between them.

Step 18. The assessment is approved

Actor: approver | **Kind:** transition | **Transition:** PENDING_APPROVAL --APPROVE--> APPROVED | **Status after:** Approved | **Recorded at:** 2026-09-19T06:57:06.569Z

An approver holding the delegation the amount requires signs the assessment off. This is the authority deciding, as an institution, that the figure is right. What follows is about giving it legal effect rather than about arriving at it.

What this proves. The status reads Approved and the action bar is empty.

Journey

Timeline

Evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:26	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:26	07f1bbf26567995929149412...

Step 19. An approved assessment is not yet a determination

Actor: notice-issuer | **Kind:** refusal | **Transition:** none (no lifecycle move) | **Status after:** Approved | **Recorded at:** 2026-09-19T06:57:08.057Z

The notice issuer tries to issue the assessment notice on the approved case and is refused. A notice gives legal effect to a determination, so it may only be issued from a finalised one. Finalisation is the point of no return: it consumes the losses the calculation relied on and stops the figures being recomputed.

What this proves. A red alert quotes the server: the notice may only be issued once the assessment is finalised.

Case TA202600000281 is APPROVED. A notice gives legal effect to a determination, so it may only be issued once the assessment is finalised.

Notices

A notice gives legal effect to the determination, so it may only be issued from a finalised assessment. Re-issuing creates a new version; the taxpayer may hold the old one.

Assessment

Issue notice

No notices issued. Nothing has been served on the taxpayer yet.

Step 20. The approved figure becomes a determination

Actor: approver | **Kind:** transition | **Transition:** APPROVED --FINALISE--> FINALISED | **Status after:** Finalised | **Recorded at:** 2026-09-19T06:57:09.814Z

The approver presses Finalise. This is the point of no return: finalising consumes the brought-forward losses the calculation relied on, so those losses are spent against this year and cannot be spent again, and the figures stop being recomputable. It is a second, deliberate act rather than a consequence of approval because approving says the number is right and finalising says the authority is now standing on it.

What this proves. The status reads Finalised, and the action bar empties because a finalised case offers no further lifecycle action.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:26	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:26	07f1bbf26567995929149412...

Step 21. The determination is written into a notice

Actor: notice-issuer | **Kind:** transition | **Transition:** FINALISED --GENERATE_NOTICE--> NOTICE_GENERATED | **Status after:** Notice generated | **Recorded at:** 2026-09-19T06:57:12.283Z

The notice issuer renders the assessment notice from the configured template and the finalised figures. The document is hashed as it is written, and re-issuing produces a new version rather than editing the old one, because the taxpayer may be holding the old one. The case moves on as a consequence of the notice existing, which is why the transition belongs to SYSTEM rather than to the officer.

What this proves. The status reads Notice generated and a numbered, versioned notice is listed.

Step 22. The notice still says what it said when issued

Actor: notice-issuer | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Notice generated | **Recorded at:** 2026-09-19T06:57:13.658Z

Verification recomputes the hash from the stored text and compares it with the one recorded at issue. It is a button rather than a badge because the question is asked at a particular moment, usually in a dispute, and an automatic green tick on every page load is a check nobody reads.

What this proves. The screen reports Unaltered and prints the stored and recomputed hashes.

Step 23. The notice is despatched, and the clock starts

Actor: notice-issuer | **Kind:** transition | **Transition:** NOTICE_GENERATED --SERVED--> NOTICE_SERVED | **Status after:** Awaiting taxpayer response | **Recorded at:** 2026-09-19T06:57:15.719Z

The officer records a despatch: the channel, who it went to, and the proof reference they can produce later. Each attempt is its own row with its own outcome, because service by post that comes back and service by email that does not are different facts. The deemed service date, not the despatch date, is what the objection window runs from. The status badge skips straight past Notice served because the same act opens the response window, which the next step shows.

What this proves. A service attempt is listed with its channel, addressee and deemed service date, and the case is served.

Step 24. The taxpayer now has a window to object

Actor: system | **Kind:** transition | **Transition:** NOTICE_SERVED --START_RESPONSE_WINDOW--> AWAITING_TAXPAYER_RESPONSE | **Status after:** Awaiting taxpayer response | **Recorded at:** 2026-09-19T06:57:16.989Z

The same act that recorded service opened the response window, and materialised the objection deadline from the deemed service date under the jurisdiction's calendar rules. No officer presses a button called this, and none should: the window is a consequence of service in law, not a decision anybody takes.

What this proves. The status reads Awaiting taxpayer response and a dated objection deadline is listed with how it was derived.

Journey

Timeline

Statutory deadlines

Dates the taxpayer is bound by. Each runs from a recorded anchor event, on the jurisdiction's own working calendar.

DEADLINE	ANCHORED ON	DUE	STATE
OBJECTION	NOTICE_SERVED 2026-09-19	2026-10-19	Open

Service clocks

Internal targets. A missed service standard is never a time bar, which is why these are recorded apart from the deadlines above.

STANDARD	STAGE	STARTED	TARGET	STATE	REMAINING
PREPARATION	IN_PREPARATION	2026-09-19	2026-10-16	Met	—
REVIEW	UNDER_REVIEW	2026-09-19	2026-09-25	Met	—

Step 25. The taxpayer disputes the assessment

Actor: objection-officer | **Kind:** transition | **Transition:** AWAITING_TAXPAYER_RESPONSE --FILE_OBJECTION--> UNDER_OBJECTION | **Status after:** Under objection | **Recorded at:** 2026-09-19T06:57:18.729Z

An objection arrives by post and an officer records it on the taxpayer's behalf, which is how most of them arrive. It must state at least one ground and may name the amount in dispute. The platform accepts it even out of time and computes the lateness separately, because refusing at the door would deny a discretion the law gives to a person.

What this proves. The status reads Under objection and the objection is listed with its number and whether it was in time.

Step 26. Whether to hear it is decided before what to decide

Actor: objection-officer | Kind: observation | Transition: none (no lifecycle move) | Status after: Under objection | Recorded at: 2026-09-19T06:57:20.466Z

Page 38 of 101

Admissibility is ruled on first and separately from the merits, and the ruling must give a reason. Refusing to hear somebody is the decision most likely to be challenged, so the platform will not let it be made silently. The case status does not move: the objection is admitted, the dispute is still open.

What this proves. The objection reads as admitted and the merits panel, with its opinion and decision controls, appears.

Part 1 of 2 of one tall screenshot, shown at full size rather than shrunk to a single page. Consecutive parts overlap by 12mm, so nothing falls between them.

Step 27. What the taxpayer must pay to be heard

Actor: objection-officer | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Under objection | **Recorded at:** 2026-09-19T06:57:22.243Z

Some jurisdictions require part of the disputed tax to be deposited before an objection is heard. The panel states the position and the arithmetic behind it, including any floor or cap, and any payment received is recorded against it. An unpaid deposit does not make the objection inadmissible; that stays a decision for a person.

What this proves. The deposit panel states either the amount required with its derivation, or that none is required here.

Part 1 of 2 of one tall screenshot, shown at full size rather than shrunk to a single page. Consecutive parts overlap by 12mm, so nothing falls between them.

Step 28. The people who considered it say what they thought

Actor: objection-officer | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Under objection | **Recorded at:** 2026-09-19T06:57:24.220Z

Opinions are recorded against named people and kept whatever the decision turns out to be. The decision is the deciding officer's and is not a tally of the votes, but a decision that goes against the opinions is logged as such, because that is precisely the one somebody will later be asked to justify.

What this proves. The objection lists the opinion against the officer who gave it.

Part 1 of 2 of one tall screenshot, shown at full size rather than shrunk to a single page. Consecutive parts overlap by 12mm, so nothing falls between them.

Journey

Timeline

Case TA202600000281 is OBJECTION_REJECTED. A reassessment follows either a dispute outcome or a closed case; this case is still in progress.

Reassess

A dispute outcome reassesses this case in place. A closed case is succeeded by a new one. The status decides which; you do not choose.

Grounds

Reopening the period on the strength of the rejected objection.

Limitation override reason

Only where the reassessment reaches past the limitation date. Lawful on narrow grounds such as fraud, and attributed to you.

Open reassessment

Every assessment of this period

Predecessors and successors, however many times the period was assessed.

This is the only assessment of the period.

Payments

A payment is recorded against the taxpayer's account for this tax type and year, not against this case. Whether it settles the case is the platform's conclusion from the figures, not anybody's assertion.

Payment type

Payment

Amount

The money received, entered as a decimal string.

Value date

dd-mm-yyyy

The date the money was received.

Source reference

The bank or receipt reference. The same reference cannot be credited twice.

Record payment

Closure

Closing freezes the final position into the record. The balance is snapshotted rather than recomputed later, because the file must say what it said at the time.

Reason code

SETTLED_IN_FULL

Retention class

Statutory

Must be configured for the jurisdiction; the API lists the valid ones if not.

Narrative

Close case

Page 48 of 101

Step 31. The dispute leaves the authority

Actor: appeals-officer | **Kind:** transition | **Transition:** OBJECTION_REJECTED --FILE_APPEAL--> UNDER_APPEAL | **Status after:** Under appeal | **Recorded at:** 2026-09-19T06:57:30.064Z

Having been rejected inside the authority, the taxpayer appeals to a tribunal. The forum must be one the jurisdiction recognises, and the forum's own reference is captured, because that number is the only thing tying the two files together when the tribunal writes back.

■ **What this proves.** The status reads Under appeal and the appeal is listed with its forum and reference.

Page 50 of 101

Step 32. What the tribunal held is transcribed, not decided

Actor: appeals-officer | **Kind:** transition | **Transition:** UNDER_APPEAL --RECORD_SET_ASIDE--> APPEAL_SET_ASIDE | **Status after:** Appeal set aside | **Recorded at:** 2026-09-19T06:57:32.349Z

There is no approve button anywhere on this panel. An appeal is decided by a forum outside the authority, so the officer is transcribing a judgment and must record the forum's reasons with it. Setting an assessment aside removes it, which is why the case can now only be closed rather than reassessed.

What this proves. The status reads Appeal set aside and the outcome is listed against the appeal with its reasons.

The forum's reasons

The tribunal held the third-party figure unsupported and set the assessment aside.

Record outcome

Page 52 of 101

Step 33. The file is closed and the final position frozen

Actor: supervisor | **Kind:** transition | **Transition:** APPEAL_SET_ASIDE --CLOSE--> CLOSED | **Status after:** Closed | **Recorded at:** 2026-09-19T06:57:34.553Z

Closing snapshots what was assessed, what was paid and what is left, under a reason code the jurisdiction configures. The balance is stored rather than recomputed on later reads, because the file has to keep saying what it said at the time. The retention class sets when it may be destroyed.

What this proves. The status reads Closed and the closure record shows the reason, the frozen balance and the retention date.

ASSESSED	PAID	BALANCE	RETENTION
7,600.00	0.00	7,600.00 GBP	STATUTORY until 2033-09-19

Assessment set aside on appeal. No further route open to either party.

Legal hold

A hold outranks the retention date: a file under litigation survives its own destruction schedule. Both placing and lifting one require a reason.

Reason

Place hold

Lift hold

Page 54 of 101

Step 34. Everything that happened, in order, unalterable

Actor: supervisor | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Closed | **Recorded at:** 2026-09-19T06:57:36.120Z

Every act in this document is an event in the ledger: who did it, when, and what the case looked like afterwards. The tables behind it are append-only, enforced by a database trigger rather than by a permission, so no update or delete can reach them from any code path. This is the record an audit reads.

■ **What this proves.** The timeline lists at least twelve events, covering opening through closure.

Page 56 of 101

The journey tab draws the deployed process definition and marks what has finished and what is waiting. A case with no process instance is a normal answer rather than an error: orchestration never fails a case, and one opened while the engine was unreachable is worked perfectly well by hand.

Step 36. The action bar offers only what the case can actually do

Actor: supervisor | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Data ready | **Recorded at:** 2026-09-19T06:57:46.110Z

A supervisor opens case TA202600000282 on a throwaway year and the engine has already gathered its evidence. Cancellation belongs to a case that never became workable, so the bar offers Assign and nothing else. The screen used to offer Cancel here and the server refused it every time, which taught officers to expect errors from buttons that look available.

What this proves. No Cancel button is present on a Data ready case, and Assign is offered instead.

Journey

Timeline

Evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:27	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:27	07f1bbf26567995929149412...

Step 37. A mandatory source that cannot answer holds the case at the door

Actor: supervisor | **Kind:** observation | **Transition:** none (no lifecycle move) | **Status after:** Initiated | **Recorded at:** 2026-09-19T06:57:47.935Z

Case TA202600000283 opens against a taxpayer whose account for this period holds euro entries while the case is assessed in sterling. The account source refuses rather than converting, because an exchange rate buried inside evidence retrieval is one nobody would ever find again. It is a mandatory source, so the case does not become workable and sits at Initiated.

What this proves. The retrieval panel reads "Case not advanced", lists TAXPAYER_ACCOUNT as a mandatory source that failed on the currency mismatch, and the status is still Initiated.

Evidence

Retrieve evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Case not advanced — 0 declared item(s) recorded; case is INITIATED.

SOURCE	REQUIRED	OUTCOME	ITEMS	DETAIL
FILING_STORE	Mandatory	Ok	0	
TAXPAYER_ACCOUNT	Mandatory	Failed	0	Account holds EUR entries but the case is assessed in GBP. Currency translation is not automatic.

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:27	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:27	4ec48ff21055dba5a258cd4c...

Step 38. A case opened in error is cancelled outright

Actor: supervisor | **Kind:** transition | **Transition:** INITIATED --CANCEL--> CANCELLED | **Status after:** Cancelled | **Recorded at:** 2026-09-19T06:57:48.385Z

A supervisor cancels the case. Cancellation is permitted only before any evidence has been gathered on it, which is why the window is so narrow: once the authority has pulled a taxpayer's data it has acted, and the file has to be closed with a reason rather than made to disappear. Cancelling is terminal and leaves the period free for a fresh case. The control will not fire without a reason typed next to it.

What this proves. Cancel is disabled while the reason is empty; once it is given the status reads Cancelled and the action bar is gone entirely.

TAXPAYER_ACCOUNT	2026-09-19 12:27	4ec48ff21055dba5a258cd4c...

Step 39. The case is parked on the taxpayer

Actor: assessor | **Kind:** transition | **Transition:** IN_PREPARATION --REQUEST_INFO--> AWAITING_TAXPAYER | **Status after:** Awaiting taxpayer | **Recorded at:** 2026-09-19T06:57:50.736Z

Case TA202600000284 needs something only the taxpayer holds, so the assessor asks for it and the case stops. The separate state matters for measurement: time spent waiting on a taxpayer is not time the authority took, and a service standard that counted it would be measuring the wrong thing.

What this proves. The status reads Awaiting taxpayer.

Step 40. A reviewer may not record the response

Actor: reviewer | **Kind:** refusal | **Transition:** none (no lifecycle move) | **Status after:** Awaiting taxpayer | **Recorded at:** 2026-09-19T06:57:52.368Z

Recording what a taxpayer sent back belongs to the officer who asked for it and to their supervisor. A reviewer checks the finished assessment and has no business entering evidence into it, so the server refuses and names the roles that may.

What this proves. A red alert names the permitted actors, and the status is still Awaiting taxpayer.

TAXPAYER_ACCOUNT	2026-09-19 12:27	07f1bbf26567995929149412...

Step 41. The assessor records what the taxpayer sent back

Actor: assessor | **Kind:** transition | **Transition:** AWAITING_TAXPAYER --RESPOND--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:57:52.952Z

Replies arrive by post, by email and over a counter, so the response is the taxpayer's act and rarely their keystroke. The assessor who asked for the information records what came back and the case returns to preparation. Who responded is captured on the audit payload rather than inferred from who typed.

What this proves. The status returns to In preparation and the ledger records INFO_RECEIVED.

Journey

Timeline

Evidence

Frozen once the case is submitted for review, so the reviewer decides on the facts the assessment was prepared from.

Retrieve evidence

Declared figures

Mapped from the filed return by the tax concept on each form field. A field with no concept is context for a caseworker, not an input to the assessment.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:27	07da776b65260908Feb360e0...

Step 42. Approval is a decision, so it can go the other way

Actor: approver | **Kind:** transition | **Transition:** PENDING_APPROVAL --REJECT--> REJECTED | **Status after:** Rejected | **Recorded at:** 2026-09-19T06:57:57.807Z

Case TA202600000285 reaches an approver who is not satisfied with it. Rejection is a distinct state rather than a quiet bounce back to preparation, because an assessment an approver declined to sign is a different fact from one still being written, and a case rejected twice has to read differently from one approved first time. The approver has to say why: the assessor who picks the case back up is entitled to know what to change.

What this proves. Reject is disabled while the reason is empty; once it is given the status reads Rejected and the only action now offered is Rework.

Step 43. The assessor takes the rejected assessment back

Actor: assessor | **Kind:** transition | **Transition:** REJECTED --START--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:57:58.276Z

A rejected case returns to the same preparation state a returned review does, and by the same action, because the work is the same work. What distinguishes the two is the history rather than a bespoke state: the ledger holds who rejected it and why, and the next submission is plainly a resubmission.

What this proves. The status reads In preparation and the bar offers the assessor the work again rather than a fresh case.

Step 44. The authority gives up on money it is owed

Actor: supervisor | **Kind:** transition | **Transition:** AWAITING_TAXPAYER_RESPONSE --WRITE_OFF--> WRITTEN_OFF | **Status after:** Written off | **Recorded at:** 2026-09-19T06:58:03.898Z

The notice on case TA202600000285 was served and nothing came back, and the company behind it no longer exists. A supervisor abandons the debt. The control is styled as a destructive one and will not fire without a reason typed next to it, because the file has to record on whose judgement the money stopped being owed. Writing off is terminal.

What this proves. The status reads Written off and the newest row of the case history moves it there from Awaiting taxpayer response, carrying the reason the supervisor typed.

Step 45. The authority finds against itself

Actor: objection-officer | **Kind:** transition | **Transition:** UNDER_OBJECTION --DECIDE_ALLOWED-->
OBJECTION_ALLOWED | **Status after:** Objection allowed | **Recorded at:** 2026-09-19T06:58:13.879Z

The objection officer accepts the taxpayer's case in full and must say why, as with any other decision. Allowing an objection does not by itself change the figures: it establishes that they are wrong, and the correction is a separate act with its own record, so that what was decided and what was done about it can be read apart.

■ **What this proves.** The status reads Objection allowed and the decision is listed with the reasons given for it.

Step 46. The correction is opened on the same case

Actor: supervisor | **Kind:** transition | **Transition:** OBJECTION_ALLOWED --REASSESS--> REASSESSMENT_INITIATED | **Status after:** Reassessment initiated | **Recorded at:** 2026-09-19T06:58:14.973Z

There is one reassessment control and no dropdown asking which kind. Because this case carries a dispute outcome, the platform continues the same case rather than opening a successor, and it records the grounds and whether the reassessment reaches past the limitation date. The move belongs to SYSTEM: it follows from the decision already recorded, not from a fresh judgement by the officer who asked for it.

What this proves. The status reads Reassessment initiated and the reassessment is listed with its shape, trigger and grounds.

Page 71 of 101

Step 47. The reassessment is picked up like any other work

Actor: assessor | **Kind:** transition | **Transition:** REASSESSMENT_INITIATED --START--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T06:58:15.530Z

An assessor takes the reassessment up and it re-enters the ordinary path: prepare, calculate, review, approve. Nothing about a case having been disputed lets it skip the controls, and the corrected figure will be reviewed by somebody other than the officer who produces it exactly as the first one was.

What this proves. The status reads In preparation and the bar offers the ordinary preparation actions, on the same case number as before.

Nothing was declared. That is a non-filer assessment, not an error.

Sources and hashes

Each retrieval is hashed so the facts a decision rested on can be shown to be unchanged.

SOURCE	RETRIEVED	CONTENT HASH
FILING_STORE	2026-09-19 12:28	07da776b65260908feb360e0...
TAXPAYER_ACCOUNT	2026-09-19 12:28	07f1bbf26567995929149412...

Step 48. Most disputes end somewhere in the middle

Actor: objection-officer | **Kind:** transition | **Transition:** UNDER_OBJECTION --DECIDE_PARTLY_ALLOWED--> OBJECTION_PARTLY_ALLOWED | **Status after:** Objection partly allowed | **Recorded at:** 2026-09-19T06:58:25.115Z

A partial outcome is its own state rather than a note on an allowance, because what happens next differs: the assessment is neither withdrawn nor left standing, and the appeal rights that follow are calculated against a figure that has moved. Each ground can carry its own outcome, so the taxpayer can see which of their arguments landed.

■ **What this proves.** The status reads Objection partly allowed and the decision is listed with its reasons.

Step 49. A partial outcome reopens the same case

Actor: supervisor | **Kind:** transition | **Transition:** OBJECTION_PARTLY_ALLOWED --REASSESS-->
REASSESSMENT_INITIATED | **Status after:** Reassessment initiated | **Recorded at:** 2026-09-19T06:58:26.160Z

The same control, the same shape, a different starting status. A partly allowed objection leaves an assessment that is wrong in a known way, so the case is reassessed in place and the earlier calculation is superseded rather than edited. Both figures stay on the file, because which number was demanded when is a fact an appeal can turn on.

What this proves. The status reads Reassessment initiated and the reassessment records the grounds for reopening.

7,600.00	0.00	7,600.00 GBP	STATUTORY until 2033-09-19

Objection rejected and the appeal window closed without an appeal being lodged.

Legal hold

A hold outranks the retention date: a file under litigation survives its own destruction schedule. Both placing and lifting one require a reason.

Reason

Place hold

Lift hold

Page 78 of 101

Step 51. The tribunal changes the figure rather than the principle

Actor: appeals-officer | **Kind:** transition | **Transition:** UNDER_APPEAL --RECORD_VARIED--> APPEAL_VARIED | **Status after:** Appeal varied | **Recorded at:** 2026-09-19T06:58:49.563Z

There is no approve control on this panel. An appeal is decided by a forum outside the authority, so the officer transcribes a judgment and must record the reasons given for it. A variation leaves the assessment alive at a different number, which is why the case can be reassessed rather than only closed.

What this proves. The status reads Appeal varied and the appeal is listed as Decided against its forum and reference, with outcome VARIED.

Forum reference

FIRST_TIER_TRIBUNAL

Must be a forum the jurisdiction recognises; the API lists them if not.

Grounds

File appeal

Record what the forum held

Varied

43ef04cd-7e23-49ad-9d54-5cd39c3cd114

The forum's reasons

The tribunal accepted part of the reconciliation and reduced the adjustment accordingly.

Record outcome

Page 80 of 101

Step 52. Giving effect to what the tribunal held

Actor: supervisor | **Kind:** transition | **Transition:** APPEAL_VARIED --REASSESS--> REASSESSMENT_INITIATED | **Status after:** Reassessment initiated | **Recorded at:** 2026-09-19T06:58:50.534Z

Recording an outcome and giving effect to it are two acts, and the gap between them is what an authority gets asked about. The reassessment is what implements the decision, and its trigger is recorded as an appeal decision rather than as an objection, so a report can tell which forum caused which correction.

What this proves. The status reads Reassessment initiated and the reassessment is triggered by the appeal decision.

Reassess

A dispute outcome reassesses this case in place. A closed case is succeeded by a new one. The status decides which; you do not choose.

Grounds

What has changed, and on what authority.

Limitation override reason

Only where the reassessment reaches past the limitation date. Lawful on narrow grounds such as fraud, and attributed to you.

Open reassessment

Reassessments on this case

SHAPE	TRIGGER	WITHIN LIMITATION	GROUND
IN_PLACE	APPEAL_DECISION	Yes	Giving effect to the tribunal decision varying the revenue adjustment.

Every assessment of this period

Predecessors and successors, however many times the period was assessed.

This is the only assessment of the period.

Payments

A payment is recorded against the taxpayer's account for this tax type and year, not against this case. Whether it settles the case is the platform's conclusion from the figures, not anybody's assertion.

Payment type

Payment

Amount

The money received, entered as a decimal string.

Value date

dd-mm-yyyy

The date the money was received.

Source reference

The bank or receipt reference. The same reference cannot be credited twice.

Record payment

Closure

Closing freezes the final position into the record. The balance is snapshotted rather than recomputed later, because the file must say what it said at the time.

Reason code

SETTLED_IN_FULL

Retention class

Statutory

Must be configured for the jurisdiction; the API lists the valid ones if not.

Narrative

Close case

Step 53. The tribunal declines to decide and sends it back

Actor: appeals-officer | **Kind:** transition | **Transition:** UNDER_APPEAL --RECORD_REMANDED--> APPEAL_REMANDED | **Status after:** Appeal remanded | **Recorded at:** 2026-09-19T06:59:01.356Z

A remittal is not a win for either side. The forum has held that the authority did not decide the matter properly and must do it again, so the assessment is neither upheld nor set aside. Modelling it as its own outcome keeps that distinction: a case remitted for reconsideration reads nothing like one the tribunal decided on its merits.

What this proves. The status reads Appeal remanded and the appeal is listed as Decided against its forum and reference, with outcome REMANDED.

Step 55. The assessment survives the tribunal

Actor: appeals-officer | **Kind:** transition | **Transition:** UNDER_APPEAL --RECORD_UPHELD--> APPEAL_UPHELD | **Status after:** Appeal upheld | **Recorded at:** 2026-09-19T06:59:13.352Z

The forum upholds the assessment, so the figure stands and the money is due. Nothing needs correcting, which is why this outcome leads to payment rather than to a reassessment. The officer records the reasons all the same, because an upheld assessment is the one a taxpayer is most likely to take further.

What this proves. The status reads Appeal upheld and the appeal is listed as Decided against its forum and reference, with outcome UPHELD.

Record outcome

Page 88 of 101

Step 56. The money arrives after the appeal is lost

Actor: system (settlement service) | **Kind:** transition | **Transition:** APPEAL_UPHELD --PAYMENT_SETTLED--> SETTLED | **Status after:** Settled | **Recorded at:** 2026-09-19T06:59:14.636Z

A supervisor records 7600.0000 received against the taxpayer's account for this period, with its bank reference and value date. Nobody presses a control called settled: the platform compares what the current calculation assessed against what has arrived since, and draws the conclusion itself. A button would let a case be marked paid without the money, which is the most damaging false record a revenue system can hold.

What this proves. The status reads Settled and the screen shows the assessed figure, the amount received since the calculation, and nothing outstanding.

Step 57. A paid case is closed and its position frozen

Actor: supervisor | **Kind:** transition | **Transition:** SETTLED --CLOSE--> CLOSED | **Status after:** Closed | **Recorded at:** 2026-09-19T06:59:15.829Z

Settlement says the money arrived; closure says the authority is finished with the file. They are separate because a settled case can still have work on it, and because the closing balance is snapshotted rather than recomputed on every later read. The file has to keep saying what it said at the time, whatever later payments or corrections do to the account.

What this proves. The status reads Closed and the closure record shows SETTLED_IN_FULL with the frozen assessed, paid and balance figures.

Appeal upheld and the assessed amount paid in full. Nothing further is due either way.

Legal hold

A hold outranks the retention date: a file under litigation survives its own destruction schedule. Both placing and lifting one require a reason.

Reason

Place hold

Lift hold

Page 92 of 101

Step 58. The ordinary ending: the taxpayer pays the notice

Actor: system (settlement service) | **Kind:** transition | **Transition:** AWAITING_TAXPAYER_RESPONSE --PAYMENT_SETTLED--> SETTLED | **Status after:** Settled | **Recorded at:** 2026-09-19T06:59:23.572Z

The notice on case TA202600000292 was served and 7600.0000 arrived inside the response window. The payment is recorded against the taxpayer's account for the tax type and year rather than against the case, because that is what a payment is made against, and a period can carry more than one case over its life. Only payments received after the calculation ran count towards it; the earlier ones were already netted off in the figure being demanded. A residue under one unit of currency is treated as settled, because chasing two pence costs more than the two pence.

What this proves. The status reads Settled and the screen shows the assessed figure, what was received since the calculation, and nothing outstanding.

Narrative

Close case

Step 59. A deadline passing is an event, not an absence

Actor: system (deadline sweep) | **Kind:** transition | **Transition:** AWAITING_TAXPAYER_RESPONSE --WINDOW_LAPSED--> CLOSED | **Status after:** Closed | **Recorded at:** 2026-09-19T07:00:23.236Z

Nobody objected to the notice on case TA202600000293 and the window ran out. Storing a due date makes nothing happen when it passes, so a sweep closes the window and the case with it. Two things were arranged for this step and are stated plainly: the objection deadline row was dated two days into the past by a direct update, because no screen back-dates a deemed service date, and the sweep was run in a process of its own because it is reachable only from an hourly cron. The transition itself was performed by the shipped scheduler under a SYSTEM identity, with no status written by this test.

What this proves. The status reads Closed and the newest row of the case history is WINDOW_LAPSED, moving the case from Awaiting taxpayer response to Closed under the sweep’s own reason.

Step 60. Silence returns the case to the officer who asked

Actor: system (the engine’s boundary timer) | **Kind:** transition | **Transition:** AWAITING_TAXPAYER --TIMEOUT--> IN_PREPARATION | **Status after:** In preparation | **Recorded at:** 2026-09-19T07:00:36.676Z

The assessor asked the taxpayer for information on case TA202600000294 and nothing came back. One thing was arranged and is stated plainly: the GB CIT response window is thirty days, which no run can sit through, so its configuration row was set to a period already ten days spent for the moment the request was made and put straight back afterwards, because the engine fixes the timer’s date when the request is made and editing a row later moves nothing. The wait, the timer and the transition are the shipped ones: the process definition parks the case on a receive task and the engine calls the API under its own service account when the window runs out.

What this proves. The status reads In preparation and the newest history row is INFO_TIMEOUT, moving the case from Awaiting taxpayer back to In preparation.

Step 61. A limitation period runs out on a case nobody ever worked

Actor: system (deadline sweep) | **Kind:** transition | **Transition:** INITIATED --LIMITATION_EXPIRED--> TIME_BARRED | **Status after:** Time barred | **Recorded at:** 2026-09-19T07:00:57.017Z

Case TA202600000296 never became workable and sat at Initiated until its limitation period ran out. Three things were arranged and are stated plainly: the period was seeded with a euro account entry so the mandatory account source could not answer a sterling case, a LIMITATION deadline row dated two days back was inserted directly because no jurisdiction configures that deadline type and no screen writes one, and the sweep was run in a process of its own with TIME_BAR_ON_LIMITATION_EXPIRY turned on for that process alone, because time-barring is off by default and TIME_BARRED is terminal. The sweep marked the row breached on its ordinary pass and then applied the time bar itself, under a SYSTEM identity, with no status written by this test.

What this proves. The status reads Time barred and the newest history row is DEADLINE_BREACHED, moving the case from Initiated to Time barred with DEADLINE_SWEEP named as what applied it.

2026-09-19 12:30	CASE_INITIATED	Initiated	system	triggerPath: RISK · assessmentType: DESK

Step 62. The same sweep stops an assessment already under way

Actor: system (deadline sweep) | **Kind:** transition | **Transition:** IN_PREPARATION --LIMITATION_EXPIRED--> TIME_BARRED | **Status after:** Time barred | **Recorded at:** 2026-09-19T07:00:57.593Z

Case TA202600000295 was assigned, started and in preparation when the same sweep reached it, so an assessment an officer was in the middle of is ended by the calendar. Its limitation deadline row was inserted the same way and in the same state as the case above, and both were time-barred by the one sweep. The sweep takes the statuses it may move from out of the transition table rather than restating them, which is why Initiated and In preparation are the two it acts on and why a case under objection or already finalised is never a candidate.

What this proves. The status reads Time barred and the newest history row is DEADLINE_BREACHED, moving the case from In preparation to Time barred.
